DOUBLE-TAKE® FOR WINDOWS® SMALL BUSINESS SERVER EDITION

Accessible and Affordable Data Protection and Disaster Recovery Solutions.

Sure, you back up your data. But how frequently? How much data would you lose in a disaster between backups? How quickly can you recover from a disaster? How long would you be without a connection to your customers, and access to critical applications and data?

Double-Take® from Double-Take® Software goes beyond periodic backup to provide continuous data replication, ensure minimal data loss, and enable fast recovery from any disaster or system outage. Double-Take utilizes patented replication technology that continuously captures byte-level changes as they happen and replicates those changes to a target server at any location, locally or at a recovery site miles away. In the event of a disaster, Double-Take lets you recover from your target server quickly. What's more, host-based Double-Take delivers better protection than many hardware-based solutions, at an affordable price for your small business.

Quickly restore access to data and applications.

When disaster strikes, you can use the secondary disk-based copy of your data to restore your production server. Compare that to the hours or days required to rebuild a server from backup tapes.

Replicate over any distance to any location.

Unlike costly synchronous mirroring solutions that limit your geographic options or require specialized network connections, Double-Take works over any distance using your existing IP networks. Locate your target server as far away as you would like to ensure maximum protection against outages or disasters.

Don't sacrifice performance for protection.

By replicating only the bytes that change, Double-Take uses the absolute minimum bandwidth required to back up your data. Plus, powerful advanced features like Flexible Bandwidth Scheduling and Intelligent Compression allow

you to control when and how much network bandwidth Double-Take can consume at different times. The superior features within Double-Take make it the best choice in data protection for WAN-based replication.

Protect your existing investments.

Double-Take is server, storage, network, and application independent – it works with the services you have today and will work with whatever best-of-breed hardware and software you need tomorrow.

Choose the proven leader.

Thousands of companies – including more than half of Fortune 500 corporations – protect their data and applications with Double-Take. Industry giants such as Microsoft®, Dell® and Hewlett-Packard® have chosen Double-Take as the software engine driving their disaster recovery solutions. How Double-Take Works

Exclusive resource planning tool. Simulate your replication solution and estimate the bandwidth you'll need to go live.

Flexible Bandwidth Scheduling. Limit network use of Double-Take during busy work hours and increase or remove these limits during nonpeak times for very efficient replication with the least amount of impact on production resources.

Integrate with existing backup solutions. Use replicated data to perform remote backups and snapshots at any time without impacting your production server.

Use standard network protocols. Replicate over any existing IP network – LAN, WAN, VPN or NAT – so you can deploy without additional infrastructure costs.

Intelligent Data Compression. Improve performance and reduce network usage by compressing only the data that will benefit.

Protect Exchange, SQL Server, and more – Bulletproof your business continuity and disaster recovery plans with proven technology.
